

Task 1

Write a program which reads from the user three non-negative integers and then prints, using symbols '*', a 'histogram' of the data represented by the numbers, i.e., three vertical bars, aligned at the bottom, with heights equal to the values of the three numbers.

For example, for numbers 3, 1 and 8 the result should look like this:

```
      *
      *
      *
      *
      *
*  *
*  *
***
```

Do not use arrays, strings or any other kind of collections.

Deadline: Mar 18 (inclusive)

Put your Java file(s), and only Java files, in a directory the name of which is your surname (without Polish or any other non-ASCII characters). Names of Java files are arbitrary, although of course they should correspond to names of classes you created. Zip the whole directory ("from above" — not just the files inside it). Then drop the zip file created in this way into folder "Tasks / Task_XX" of the GAKKO system (where 'XX' is the task number).
